

**Roteq's** partnership with  
Brüel & Kjær Vibro enables us  
to offer industry leading  
technology

## BRÜEL & KJÆR VIBRO VC-8000

VC-8000 is an innovative product line conceived and developed by the same engineers that delivered multiple generations of worldclass machinery monitoring systems, such as the Bently Nevada™ 3300, 3500, 2201, 1701, 1900/65, and 3701.

VC-8000 advances well beyond those systems by delivering API 670-compliant online machinery protection system in a dramatically simpler, yet more powerful architecture that uses a single, programmable module type. This “Universal Monitoring Module” was inspired by today’s generation of smart phones, where a single piece of hardware addresses multiple applications simply by loading the right apps, rather than different hardware for every application.

VC-8000 brings an equal level of innovation to condition monitoring software by using the OSIsoft PI System as its data infrastructure rather than requiring a standalone “silo” just for vibration data.

### HOW ROTEQ SUPPORTS YOU

Through our partnership with Brüel & Kjær Vibro, Roteq offers customers:

- Service of our existing system
- Recommendation for improvement/upgrades
- Commissioning and new installation services
- Vibration support from our specialist team
- Troubleshooting of all vibration systems
- Machinery analysis support
- Emergency callouts
- Flexible approach
